- Co-lead Appirio's sole Women Group to foster conversation, share ideas and create strong rapport between office and remote employees.

Grace Saint

Project Experience

Accenture

- In Experience Cloud implementation, build, research and design custom lightning web components, aura components, flows and apex to meet client's requirements.
- Examples of customization built:
 - Utilize external JavaScript libraries such as sheetjs, exceljs, and filesaver to read, write and export spreadsheets with data that users select as part of flow implementation.
 - Custom datatable using an extensible lightning-datatable implementation to include custom cells within the datatable such as icons and images.
 - Custom search solution for users to search details on client accounts by entering in 5000+ mobile numbers to find the data they are looking for. Search allows for area code, single number search and multiple number search.
 - Utilize Lightning Message Service to display side 'flyout' modals by publishing/subscribing messages to several components across the DOM. 'Flyout' modals are aura component containers for flows.

7Summits, an IBM Company

- In Experience Cloud, Health Cloud, Sales and Service Cloud implementations, build, research, and design custom lightning components, aura components, flows, apex (integration work) to meet client's requirements.
- Examples of customization built:
 - Built scheduling functionality for patients to schedule appointments with health care providers based upon their current systems.
 - As part of scheduling functionality, apex sorted through doctor's availabilities where data was retrieved through an API call to an EHR system that help doctor's data.
 - Built geolocation API callout through Google geolocation services to find the distance between a patient's address and an address of a health provider's location.
 - Built custom search solution to look for knowledge articles that users search keywords that exist in the articles. Search solution used pagination to keep page load times quick and CPU limits within check.

Appirio

- In Sales and Service cloud implementations, developed and help design technical solutions for aura components, flows, apex and integration work.
- Examples of customization built:
 - Utilize flows and invocable apex methods to make callouts to external systems to grab data surrounding a user's bank information, their debit/credit cards, etc.
 - In the debit/credit card serviceable flows, make callouts to external systems to order new designs for cards, order new name for the cardholder, set a new billing zipcode, and several other actions to service the cards.
